

HOOD-TYPE DISHWASHER

ISM-HK850

STANDARD FEATURES

500 × 500 rack · pass-through

- ✓ Pass-through hood operation: load a rack on one side, lower the hood, draw it clean off the other. A continuous line rather than a door to open and empty.
- ✓ Throughput of 60 racks an hour on the short cycle, which is the volume an undercounter machine cannot clear once a kitchen passes a few hundred covers.
- ✓ Wash height of 425 mm takes stock pots, gastronorm containers and tall service ware through the same machine as the plates.
- ✓ Triple water filtration and a self-cleaning vertical wash pump hold that pace without a strip-down in the middle of service.
- ✓ Needs 1969 mm clearance with the hood raised and a planned wash-up layout with separate soiled and clean sides. Three-phase supply required.
